Facilities Service

THE PROGRAM

We thank you for your attention and for giving us the opportunity of the brief presentation.

Hoping to pursue a satisfactory cooperation, we intend to offer full readiness to contribute, with our know-how and organization, to realize your building programs.

Our Group operates through partnerships in various sectors ranging from housing construction to industrial plants of some specific sectors.

We can offer:

General Contractor Services – Consulting – Design

Curtain walls and ventilated - Building cladding typically

Metal carpentry - wood and laminated - Profiles in Composite Materials

Window frames in aluminum and of all materials in general - Partitions - Structural glazing technology

Prefabricated houses

Architectural photovoltaic systems - Renewable Energy

Industrial plant construction and personnel training

F
E
RROALLUMINIO – ED.I.S. - KYRIOM
Park Place – Project Songdo –
Ulaan Bataar, Mongolia 2015

In this papers we intend to present our Group.
We point to his attention only some of the best projects from our partners.
The images refer to works performed in whole or in part from our partners,
in some cases was made the complete works, in others only the outer shell, in other internal partitions and finishes, in other installations in the pipeline, in other production workshop third account.

KYRIOM GROUP

Facilities Service

SPECIALIZATIONS :

Realization of innovative systems in the art of construction, use of composite materials produced in factories owned by us, realization of systems for the construction of prefabricated houses or components for mixed structures, composite materials, steel, wood, concrete.

Possibility to build furniture and technological dividers for offices, mobile walls for clean rooms in aseptic hospital environment, for the pharmaceutical, food and electronics.

Metal doors and windows, curtain walls and ventilated, technical study for the development of architectural projects, final design for special building envelopes.

Research and development with possible application of innovative materials in collaboration with leading European research institutes and testing.

FERRO ALLUMINIO – ED.I.S. - KYRIOM
Park Place – Project Songdo -
Ulaan Bataar - Mongolia 2015

Architectural design, engineering executive with 3D processing, management and construction of the rendering and virtual movies.

Engineering calculations of static loads of the various materials (steel, aluminum, glass, plastic, composite, etc.)

Calculation of thermal transmittance and resistance to ultraviolet and infrared rays (sunlight).

Study of external and internal air flows (especially for double skin facades bioclimatic) with, for example, determining the isocomfort point.

Use of electronic and computer systems (hardware and software) of the latest generation with the integration of confidential operational systems.

Installation of manufactured goods with the use of equipment and machinery owned by us or hire, possibility of installations throughout Italy and abroad,

DESCRIPTION OF PRODUCTION

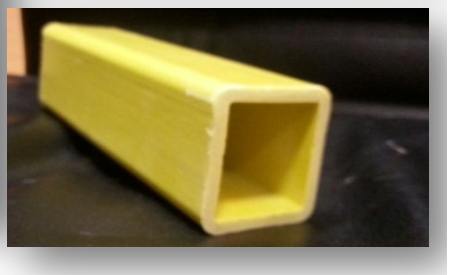

STRUCTURES AND COMPOSITES :

Our culture of mechanical extraction leads us to prefer the prefabricated buildings with steel structures but lately, for their excellent mechanical, chemical and life span, we intend to increase the use of composite materials. The composites allow the creation of technologically advanced buildings, very robust and light, resistant to many chemicals and extreme environmental conditions, excellent for earthquake-resistant structures, all with lead times of less than 50% compared to traditional systems.

KYRIOM GROUP
Facilities Service

WINDOWS AND DOORS:

We are able to provide a full range of external and internal doors and windows, both cheap but functional, both high level with accessories 1st quality, with air sealing characteristics - exceptional water thanks to the open joint system and the thermal break in class A.

COURTAIN WALLS :

We specialize in the production of aluminum curtain walls, steel, stainless steel, corten steel, aluminum structures, composite, steel, laminated wood or tensotrutture in stainless steel wires, glass or other materials.
The most used versions: with profiles outside view, semi-structural, structural, double skin or active, cells, hung.
Thanks to the presence of an internal technical study and our engineering, we are able to deal with the adequate tranquility even the most daring demands.

FERRO ALLUMIO – ED.I.S. - KYRIOM
Towers of embassies - Total Sq. 13,100
Ulaan Bataar – Mongolia
First Lot Mq. 5,600
Second Lot Mq. 7.500

ADDITIONS:

Our systems can be integrated with special products: photovoltaic and solar panels, silk-screened glass, laminated glass with PVB / Eva / Spg / filtering or decorative films,with LCD and treatments obtained from nano technologies, sound absorbing panels, anti deflagration systems, etc

.

INSTALLATIONS :

Our partners are specialized in the assembly of structures of all materials, prefabricated houses, curtain walls and ventilated building envelope in general, interior finishes of buildings in general, furniture and wall units, civil and industrial fittings, plants of all kinds.
They are provided with equipment partly own and partly to rent and are able to operate all over the world.

SPECIAL WORKS :

Our Partners are able to create very complex
and daring works thanks to the expertise of the professionals of the technical studies with which we work and the professionalism of the manufacturers and installers.
We are able to realize from the domed structures or glass pyramid
to tensile steel cables, roofing and large windows supported by glass
carrier carpentry, composite materials, steel or laminated wood.
We want to offer the Designer the opportunity to have at his side a
partner able to realize his most daring projects.

KYRIOM GROUP

Facilities Service

VENTILATED FACADES :

Coated with any material, Alucobond, aluminum thick, bronze alloys, titanium zinc, stainless steel, titanium, granite, marble resin, marble or recomposed wood with polymer resins, marbles on support of aluminum honeycomb, cooked, ceramic, plastic laminate, fiber cement, wood, etc.

.

ED.I.S. - KYRIOM
Hotel Ninfa – Torino – Italia

LATTICE STRUCTURES :

Realization of spatial lattice structures made of laminated wood or composite material.
This system allows to realize large spans without intermediate support pillars.
The material most commonly used is the laminated wood but are in design version made of composite materials that could ensure much lower weights.

WOOD SYSTEM - ED.I.S .
Fields covered multi sports

SOLAR SHIELDS AND METAL FABRICS

We can provide solar screening of all kinds, in different materials, aluminum, wood, copper, stainless steel, glass, with incorporated photovoltaic cells, perforated and expanded metal sheet, metal nets with different types of mesh, tensile structures with metallic woven stainless steel, adjustable structures or fixed.
For mobile versions possibility of manual or motorized movement, even with integration of domotic automation systems.

Solar Screens Mq. 3.300

KYRIOM GROUP

Facilities Service

CLEAN ROOMS :

Implementation of clean rooms for the food industry, medical, electronic and chemical, with glass or blind dividing walls.
Absence of a horizontal overlap (even glass contour frames) which could favor the proliferation of bacterial colonies.
Special corner profiles to the floor, ceiling and vertical both in aluminum and PVC, facilitate the cleaning and hygiene, possibility of use of wall cladding materials with exceptional characteristics sanitation.
Access Cabins with sterilizing showers, cabin pressurization as needed.

ED.I.S. - KYRIOM –Sterile Clean room for pharmaceutical industry – BCC HAEMOPHARM – Sondrio - Italy

INDUSTRIAL INSTALLATIONS :

We can realize lines for the production of profiles of composite materials, painting systems with epoxy powders and for some sectors of the food industry.
In addition to the machines also we offer the design, the company's business plan, production start with Italian technicians and training of personnel on site.

ED.I.S.
Line of production of composite profiles

KYRIOM GROUP
Facilities Service

PREFABRICATED HOUSES IN COMPOSITE MATERIALS :

Our project of prefabricated houses is extremely innovative for the materials used for the thermal technical performance, durability and comfort. They lend themselves to be successfully adopted for the construction of high-quality homes but also for the Social Housing.
Thanks to the lightweight and durable materials there are excellent anti-seismic performance. Resistant to weathering and many chemicals, do not provide favorable habitat for settlement of small animals, insects and parasites.

Modern high-performance Villa

There is a faster construction time and very affordable installation costs.
Minimum and simple maintenance, architectural versatility and a wide choice of finishing materials.
It's also suitable for commercial and industrial buildings.

RESEARCH AND DEVELOPMENT :

Research together with the constant technological innovation is for us a fundamental commitment.
Researching internally we collaborate with important Italian Universities.

In particular we perform within the processing of the correspondence to the static loads of the various materials (steel, aluminum, glass, pultruded composite materials, etc.), the properties thermo-acoustic and resistance or filter ultra violet and infrared rays (solar radiation) properties.

Study of new products for doors and windows and facades as well as systems and equipment for their realization

Study of external and internal air streams (especially for double skin facades bioclimatic) with, for example, determining the isocomfort point.

Use of electronic and computer systems (hardware and software) of the latest generation with the integration of confidential operational systems.

Designing in participation with external firms specialized in home automation.
.
